Dear Valued Customer,

Parker Steel Co. would like to say, **Thank You**, for your continued loyalty and support. We would like to take this opportunity to tell you about some of the new products available. As always, we stock the highest quality of metric size metals in a large variety of shapes, grades, and materials.

[Metric Square Telescopic Tubing](#)

Metric sized square telescopic tubing is now offered at Parker Steel!

Overall, telescopic tubing is a more precise tube. The weld bead is removed which allows another tube or another solid shape to slide inside the tube easily.

Generally with standard square tubing, a combination of the weld bead and the tolerance will not guarantee two tubes to slide inside each other easily. The tolerance on both the standard and telescopic square tubes is a plus or minus tolerance, which varies based on the size of the tube. However, the telescopic tubing has the weld bead removed which allows the inside of the tube to be more precise and consistent throughout, allowing them to be considered telescopic.

Specifications:

- Brand name: Quartrex Fine
- Tighter Tolerance than the Standard 10305-5
- Corner Radius: 1-1.25 x's wall thickness.
- Inside welded seam is removed.

4140 Material

Parker Steel now stocks round tubing in a modified grade. Since 4140 is not a European- specific grade, the 4140 modified is comparable. Our sizes range from 10mm OD to 80 mm OD with many different wall thicknesses available. We currently stock 4140 in Round Tubing, Hexagon, and Plate. Please visit our [New Products Page](#) to view all of our exciting new products. Some of our new offerings include Chromium 6 Free

Image Deleted

Parker Steel now stocks a variety of Round Stainless Steel Capillary Tubes in metric sizes in addition to our other metric sized metal products.

Our metric capillary tubes are small stainless steel tubes with very precise tolerances. This product line is available in a broad combination of inner and outer diameters ranging from 0.4mm OD up to 6mm OD. Wall thicknesses vary based on the OD of the Capillary Tube that is needed.

Capillary tubes are generally used in, but not limited to, the medical and food industries and are sometimes referred to as instrumentation tubing as well.
