4140 is a heat treated material and is TG&P. Because it has a high tensile strength, it is often used for shafts or pins.

We carry the 4140 in metric annealed plate in various sizes ranging from 4mm up to 30 mm. Our modified HT Q&T hexagon ranges from 10mm to 55mm, and the modified round tubing has OD's from 8 to 80 mm. These items are available now.

As always, 98% of all orders at Parker Steel ship the same day and we have a low \$85 minimum order. We also have a 99% delivery performance rate for items that are in stock and shipped using Parker Steel approved carriers.

FREE ! Metric Conversion Calculator Tool.

We have designed this useful conversion calculator tool especially for our customers.

It is a web application that sits on your desktop. Now with the click of your mouse, you can have a conversion calculator right at the tip of your fingers. It takes up no more space than a typical desktop icon. Once clicked, it maximizes to about the size of the image above. When you're done, simply click the red "x" to have it return back into the small icon. This download takes about 2 minutes to install.

[Click here](#) to be taken to our download page. There is a short list of instructions there.
